

# FISC Invoice Processing Workflow

FISC receives data file(s). Client can track jobs online throughout processing with FISC View.

Data files are loaded into FISC's system. A production control ticket is used to ensure quality control.

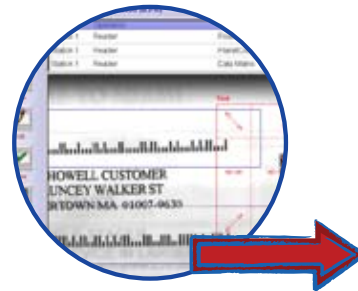

Files are processed for pre-sort, including reports for the post office. Processed files are verified.

Invoices are printed on high speed laser printers.

PDF invoices are posted to online archive.

Work is processed in our automated environment. JETVision is used for several quality assurances.

With selective insertion, information on the invoice is used to match marketing pieces with specific invoices for target marketing.
